

**NAME**

**rudix** — Rudix package manager command line tool

**SYNOPSIS**

```
rudix [-h | -l | -R | -v] [-i package.pkg] [-r org.rudix.pkg.name]  
      [-I org.rudix.pkg.name] [-L org.rudix.pkg.name] [-S path]
```

**DESCRIPTION**

The **rudix** utility can install, remove, print information and search files under Rudix domain. Every package has a unique identification and you can refer to Rudix packages with its full ID (*org.rudix.pkg.name*) or with its short ID (*name*).

Without any options provided **rudix** prints a list of packages installed.

The options are as follows:

- h**        Print help on screen and exit.
- v**        Print version and copyright information.
- l**        Print a list of packages with package id, version and install date.
- i** *package.pkg*  
          Install package. This operation requires root privileges.
- r** *org.rudix.pkg.name*  
          Remove package. This operation requires root privileges.
- R**        Remove all installed packages. This operation requires root privileges.
- I** *org.rudix.pkg.name*  
          Print package id, version and install date.
- L** *org.rudix.pkg.name*  
          List package files.
- S** *path*  
          Print all packages that contains path.

**HISTORY**

The **rudix** command has first incarnation in 2006 to allow removing packages.

**BUGS**

None reported.
